

## Project 2 – Fun with Fancy Forms

**Due: April 16th, 11:59pm**

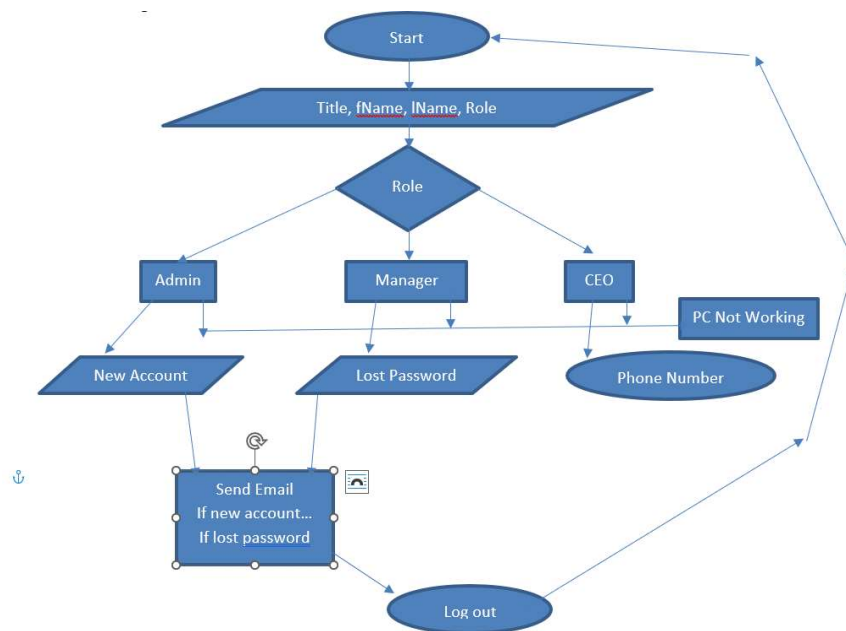

With our help, our client has been able to grow their business and now needs an IT Support System

Using Project 1 as a starting spot, build something that looks similar to this (below is only 3 of the pages).

From a technical perspective, here are the requirements:

- 1) PHP Pages with include(s) for both the header and footer page.
- 2) An initial form with the 4 fields. Title, first name, last name, and role
- 3) Logic that replicates the flowchart below. Note: The three different roles
- 4) A decision page that displays specific results based on the role selected
- 5) Use of get, post, and session variables for title, first name, last last, and role

**Please Note: Send Email does not need to send an email. It's just a form that can accept an address.**

## Supplied Assets:

- The main image:  
<https://raw.githubusercontent.com/Zulinov/skillsProjects/main/paddle-white.png>
- Hamburger icon:  
<https://raw.githubusercontent.com/Zulinov/skillsProjects/main/hamburger.png>

## Required Pages and Content

index.php

header.php (Start session)  
->Button to Logout.php  
Form -> Send values of form to problem.php  
footer.php

problem.php (depending on form value for role, show the correct links )

header.php  
if role = 'admin' -> link to: new-account.php and isnt-working.php  
if role = 'manager' ->link to: lost-password.php and isnt-working.php  
if role = 'ceo' ->link to: need-help.php and isnt-working.php  
footer.php

new-account.php

header.php  
Form -> send-email.php emailType = newAccount  
footer.php

lost-password.php

header.php  
Form -> send-email.php emailType = lostPassword  
footer.php

need-help.php

header.php  
Content for CEO, just show a phone number to call  
footer.php

isnt-working.php

header.php  
Content (Gif of your choice)  
footer.php

send-email.php

header.php  
if emailType = newAccount-> just display new account msg  
if emailType = lostPassword-> just display lost password msg  
footer.php

logout.php

header.php  
Destroy session  
Content: Confirm Logout  
footer.php

**Submitting Instructions:**

- 1) Upload your complete project (html file, css file(s), images, etc.) to GitHub.
  - Be sure to include your first name and last name.
- 2) Create an account, and upload your project here using this free hosting service. Be sure to note the URL of your project. Test to make sure it works as intended  
<https://www.000webhost.com/free-php-hosting>
- 3) Post BOTH your GitHub Repo link and URL your hosted project here here:  
<https://forms.gle/rQ7q6ArxnceqAJgL7>
